

Problem solver that aims at bridging the gap between technology through data driven and creative approaches. Believer that process improvement and innovation needs to take into account the current vitals(data), process, people and technology to identify the quick wins and the longer term strategy. Experienced in the areas of project management, product management, campaign management, process improvement and data analytics.

TECHNICAL SKILL

- Analytic Tool(s): ACL, SAS, IBM SPSS, Metabase, Clevertap, Google Analytics
- Query Language(s): SQL [Redshift, Oracle, SQLite]
- Programming Language(s): Javascript, JQuery, Ruby, Python, R

WORK EXPERIENCE

Growth Team, HealthifyMe – Associate Product Manager June 2019 – September 2019

- Responsible for reviewing and driving growth for Malaysia and Singapore through the HealthifyMe app
- Obtained feedback from users on key features and challenges faced to design new features/enhancements
- Work with tech and design team to develop product features (UI/UX).
- Developed test plan for positive and negative scenarios and perform user testing prior to launch of product features
- Developed dashboard to track key business metrics and performance of features

Transformation Team, U Mobile – Assistant Manager/Product Owner(App) November 2018 – June 2019

- Work with key stakeholders to setup project workflow and adoption of SCRUM for mobile app development
- Identified key business objectives for new app development and determine key stakeholders to be involved
- Host workshops with key stakeholders to identify key business requirements and to align requirements to develop long term app roadmap
- Defined key metrics for performance, revenue and engagement monitoring
- Perform analytics using SAS, SQL Queries and IBM SPSS to identify and track historical metrics and develop reports and tracker of current app performance as basis for the new app
- Developed product backlog based on the following prioritisation:
 - Criticality of feature to business based on user feedback and cost/revenue impact
 - Data driven analysis of current app usage to determine revenue and usage impact
 - Key metrics and data field requirements and data frequency to track revenue, engagement and customer behaviour

Mentoring & Engineering Team, NEXT Academy – Mentor/Junior Engineer April 2018 – November 2018

- Review course materials and work with mentor team to restructure course delivery and syllabus for effective learning. Key objective was to engage students and to train students to be self sufficient
- Mentored students on the following tech stack:
 - Frontend: HTML, CSS, Javascript, JQuery, Bootstrap
 - Backend: Ruby on Rails, SQL

Customer Value Lifetime Management, U Mobile – Assistant Manager January 2016 – December 2017

Campaign Management System Implementation – Campaign Team/Product Owner

- Define business requirement and structure of campaign system through incorporating user and customer experience. Structure takes into consideration business objectives, customer experience, inter department user experience and feedback loop for campaign recalibration
- Identify key business objectives and perform campaign planning to define data frequency and data fields required for performance monitoring, customer segmentation and behavioral analysis
- Work closely with IT Project Manager and Vendors in ensuring requirements are met and identify workaround solutions where technical solutions are unable to meet business requirements
- Review test plan to ensure completeness of positive and negative scenarios based on business requirements. Perform UAT and post deployment live test prior to official launch

Acquisition, Upgrade and Loyalty Campaign – Campaign Team/Product Owner

- Identified key metrics based on business objective and developed report structure for high level monitoring and management reporting
- Perform analytics using SAS queries and IBM SPSS on industry trends, customer segment and align findings with key business objective to identify campaign opportunities
- Plan and map the end-to-end customer journey whilst considering currently available resources, enhancements or process changes. For enhancement and campaign execution, considered both timeline and cost impact.
- Define business requirements and platform requirements where applicable for campaign execution. Review test plan and perform UAT and post deployment live test prior to launch
- Engage and work with cross-functional teams critical for execution of campaign

Microfinancing – Platform & Product Team

- Reviewed entire financing workflow to identify process and customer enhancement
- Work with IT department and vendors for the change requirements and platform integration to POS system to implement controls for fraud prevention
- Perform analytics using SAS queries to identify opportunities for tactical campaigns
- Engage and work with external partner and internal cross-functional teams for execution of campaign

Enterprise Risk Services, Deloitte – Senior Consultant

November 2011 – October 2015

GST Project Management Office (Insurance Industry) – Team Lead

- Review the impact of GST to clients' environment through understanding clients' current business process and system functional aspects
- Enhance and develop new system and process workflows to incorporate GST requirements throughout clients' operations including the following:
 - Studying and understanding the impact of GST to the insurance industry
 - Understanding of clients' current business process and the existing IT systems' design and functional aspects
